Profile

Full Stack & Mobile Software Engineer with hands-on experience delivering scalable systems for banking, tourism, and retail sectors. Strong engineering mindset with solid knowledge in system design, software architecture, NFRs, and clean code principles. Experienced in building secure REST APIs, designing maintainable architectures, and deploying applications using Docker and CI/CD pipelines. Passionate about building reliable, high-performance systems that solve real business problems.

Professional Experience

Freelance Full Stack & Mobile Software Engineer

Freelance / Self-Employed

2023 – Present

- Delivered 6+ full-stack systems for real clients across banking, tourism, and retail sectors.
- Designed scalable architectures using layered design, service-based structure, and clean code principles.
- Built secure RESTful APIs handling thousands of monthly requests with role-based authentication.
- Developed responsive frontends using React.js and Vue.js, and mobile apps using Flutter.
- Containerized applications using Docker, reducing environment issues by 70%.
- Implemented CI/CD pipelines that cut deployment time from 30 minutes to under 5 minutes.
- Collaborated directly with clients to gather requirements and deliver iterative releases with high satisfaction.

SELECTED PROJECTS

Banking System

Laravel, React.js, Flutter, MySQL, Docker

- Designed a secure banking architecture focusing on data integrity, auditing, and access control.
- Implemented core banking features including accounts, transactions, and authentication.
- Achieved <200ms average API response time through optimized queries and caching.
- Applied layered architecture and service-based design to ensure maintainability and scalability.
- Designed database schema supporting 20+ entities with strong relational consistency.

Tourism Web Platform

React.js, Laravel, MySQL

- Built a complete tourism platform supporting browsing, reservations, and event management.

Skills

Software Engineering

- Software Architecture
- Software Design & Modeling
- Requirement Analysis
- System Decomposition
- Design Patterns (MVC, Repository, Service Layer)
- Non-Functional Requirements (Performance, Security, Scalability)
- System Analysis & Requirements Engineering
- Clean Code & SOLID Principles

Frontend Development

- HTML5, CSS3, JavaScript
- React.js, Vue.js, JQuery
- Bootstrap, Tailwind CSS
- UI/UX Principles

Backend Development

- PHP, Laravel
- RESTful APIs
- Authentication & Authorization
- Business Logic Design

Mobile Development

- Flutter
- Cross-platform Application Development

Databases

- MySQL
- Database Design & Optimization

DevOps & Tools

- Docker & Containerization
- CI/CD Pipelines
- Git, GitHub
- API Integration
- Version Control

- Designed system architecture optimized for performance and high availability.
- Developed 15+ modular frontend components and scalable backend services.
- Integrated REST APIs and ensured responsive UI with fast load times.
- Improved performance by 30% through query optimization and caching.

Restaurant Management System

React.js, Laravel, MySQL

- Developed a full restaurant management system handling employees, orders, and workflows.
- Designed database schema for 25+ tables supporting daily operations.
- Improved system performance by 40% through optimized queries and caching strategies.
- Implemented clean MVC architecture ensuring maintainability and scalability.
- Built dashboards and analytics for real-time order tracking and reporting.

ADDITIONAL PROJECTS

Job and Freelancing Portal (React, Laravel)

E-Commerce Web and Mobile System (React, Flutter, Laravel)

Pharmacy and Medicine Warehouse Management System (Flutter, Laravel)

Event & Occasion Organizer Platform (HTML, CSS, JavaScript, Laravel)

Government complaint management system(laravel , React , Flutter)

(Full project list available on portfolio)

System Design & Architecture

Layered Architecture

Service-Based Architecture

API Design & Documentation

Scalability & High Availability

Caching Strategies (Redis)

Database Normalization

System Reliability & NFRs

CI/CD Pipelines

Dockerized Environments

Load Balancing Concepts

API Rate Limiting
